1 The Macintosh Classic was the personal computer which was made by Apple in 1990. It had a 23 cm monochrome screen and a 4 megabyte (MB) memory. It was cheaper than earlier Apple computers and very easy to use. It was their first commercially successful computer.

2 Stephen Wozniak is the American computer engineer and programmer whose computer designs became the original Apple I and Apple II computers. He and Steve Jobs became friends when they were both working at Hewlett Packard. They started making computers in Jobs's parents' garage and together they founded Apple Computers (now Apple Inc.) in 1976.

3 Mona Simpson is Steve Jobs's sister. Jobs was adopted when he was born, but in the 1980s he found his biological mother, who told him that he had a sister. Mona and Steve met for the first time in 1985 (when she was 25 and he was 30) and they became very close. They kept their relationship secret for a year until Mona introduced Steve as her brother at the party which she gave to celebrate the publication of her first novel, *Anywhere But Here*.

4 Mountain View is the area in California where Steve Jobs grew up. He was born in San Francisco and was adopted by Paul and Clara Jobs. When he was six years old the family moved to Mountain View, which was becoming a centre for electronics. People began to call the area 'Silicon Valley' because silicon is used to manufacture electronic parts.

5 This is the logo which was designed by Jonathan Mak, a Chinese design student from Hong Kong, as a tribute to Steve Jobs when he died. The design, which used Jobs's silhouette incorporated into the 'bite' of a white Apple logo, became a worldwide internet sensation. The teenager said that Jobs had inspired him to become a designer.
